Morgan Stanley   October 26, 2020
122 Waterloo St
Glasgow
G2 7DP

Dear Recruiter,

As a student at University of Glasgow, many of my colleagues have praised their internships at Morgan Stanley. Unlike the stories I heard from it's competitors, Morgan Stanley is using the top technology when it comes to cybersecurity, machine learning, automation, and user experience.

At my first job at UROS, I learned how satisfying solving a problem can feel. Conversly, I also learned how reverse engineering old software solutions was something that I wouldn't wish upon my worst enemy. Ever since then, I have been determined to learn the newest technologies and best practices in the hopes that I would never impose poor software solutions to future source code maintainers. I believe my passion for beautiful, expandable software solutions would make me a valuable addition to Morgan Stanley.

Along with the various technologies and languages I have learned to use at University of Glasgow, I have taught myself full stack development from scratch. I believe the web will be here to stay, and the rapid developments make it a challenging yet enticing field to specialize in. I believe both my acquired skills and my desire to learn will help me overcome any new and unfamiliar challenges I may encounter as a technology analyst at Morgan Stanley.

I thank you for taking the time to read my application and for considering me as a candidate for this position.

Sincerely,
Eerik Saksi
